

Administering of PMSG

- Administer Intramuscularly
- Administer Dosage Accurately
- Every Program has to be planned carefully
- Within the breeding season: 300 i.u. relatively low and safe
- Outside of Autumn and Spring increase dosage of PMSG.
- Increased dosage: Higher ovulation rate
- Larger breeds require higher dosages eg. Mutton Merino 420 i.u.
- 1 Vial contains 6000 i.u. PMSG.
- Dissolve content of one vial in 50 ml sterile saline/water for injection
